My Images are not scaling within Templates

Last Modified on 08/18/2022 9:57 am EDT

If you are using a PoliteMail template and images are not scaling while the text and table are, you can use the **mo_re100%** fix that allows the images to scale with text and table.

Right click the image and click **Edit Alt Text (format picture in older versions of Outlook)**. Add mo_re100% without quotes to the alt text of the image.

This instructs PoliteMail to change the image height to "auto" and the width to "100%" during sending (something you can't do in Outlook). The effect is that the images will scale with the table they are inserted in.
