Wouldn't it be nice to have a tool with the power of PoliteMail but for your Teams messaging? That's what Commlytics for Teams is all about!

Commlytics lets you analyze your Teams Channels or Chats to see who your active Influencers are, how your Teams messaging is being received, and more! Best of all, just like how PoliteMail can be accessed from within Outlook, Commlytics is all within Teams – no additional standalone application to open. Lastly, all this data is stored locally to the user and only held in cached databases.
