

# Two-Way Entra ID Synchronization

Last Modified on 01/15/2026 8:42 am EST

Applies To:  **PoliteMail Desktop**  **PoliteMail Online**  PoliteMail M365

Version:  5.0  5.1  5.2  **5.3+**

Lists in Entra ID are often not current, filled with former employees or not filled with the newest hires or transfers. That's why Syncronym was created by PoliteMail, enabling organizations to sync their PoliteMail lists with more accurate lists, such as a payroll system or HR Information System (HRIS). But wouldn't it be nice to have your PoliteMail lists update Entra ID as well?

With the latest version of PoliteMail, not only can you access your Entra ID lists in PoliteMail, but the lists you create in PoliteMail can synchronize back to Entra ID! With this feature, your lists are as accurate as possible across all systems.

## Requirements

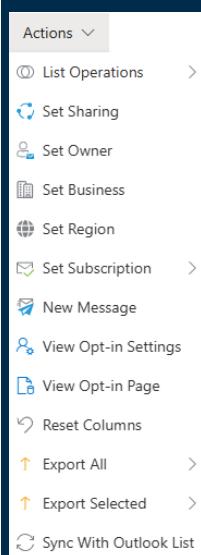

You need the Graph application for PoliteMail list expansion for the functionality to work. Be sure to set up the needed [Graph permissions](#) on the application side.

Two-way Entra Sync requires a new license and is an add-on to PoliteMail.

## Creating a New Entra ID List from PoliteMail

1. Create a list in PoliteMail. Initially, this list does not exist in Entra ID. If you already have a list that you want to create in Entra ID, skip to the next step.
2. Select your newly created list from the grid so the details panel opens on the right side of your screen.
3. Check the 'Create New Outlook List' box, and then click 'Save'.
4. After a minute or so, refresh your PoliteMail screen and you should see your Entra ID list in the 'Sync to Outlook List' field, which confirms for you the list has been created in Entra ID.

## Synchronizing List Membership

When list is first created in Entra ID from PoliteMail following the steps above, the list is created, but the list does not have any members.

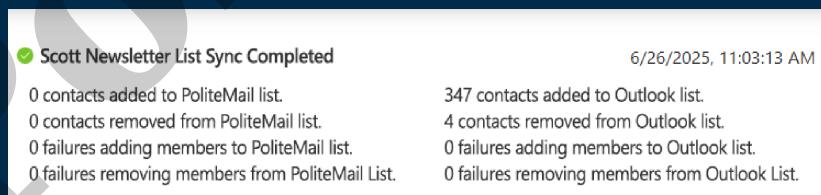

- In PoliteMail, select the list and go under the Actions button and select Sync with Outlook List.

Depending on how many people are being synchronized, it may take several minutes for synchronization to complete. When completed, a List Synchronization Summary window will display, providing you with specifics on what exactly was synchronized.

The dialog box is titled 'Mailing List'. It contains the following fields:
 

- Mailing List Name: Sample List
- Subscription:
- Create New Outlook List:
- Sync to Outlook List:
- Business: Development
- Region: Asia
- Owner: Automated User
- Description:
- Shared:

 At the bottom are 'Save' and 'Cancel' buttons.

## Caveats

- Shared Mailboxes cannot currently be synchronized as Shared Mailbox support is not performed by the Graph API. Shared Mailboxes will need to continue to be manually synchronized.
- Properties for users who belong to Mail-Enabled Security groups are managed through the Mail-Enabled Security group settings, which may not be fully supported for modification via the Graph API. As a result, changes to user properties for these users may fail to sync. More information may be found from Microsoft [here](#).

## Sync FAQ

## **Can I connect to an Outlook / Entra ID Group when I import a .csv list?**

Yes! When you click on the Import button to import a .csv or other list, an option has been added to the panel on the right to connect to an existing Outlook List.

## **If a recipient subscribes or unsubscribes to/from a List, will the Outlook / Entra ID list also be updated?**

Yes!

## **Does synchronization take place automatically in the background, and if so, how often?**

You can set how often the synchronization will take place at **Settings > List Service**.

## **What if an external email address replies or subscribes to the list?**

External contacts can also reply to the message, even if their email address is not part of the company's domain. For example, a recipient could reply to a message using their personal Gmail account. The address will be marked as external, and all internal domain users in the list will still sync with your Outlook / Entra ID list. If you have access to Entra ID, these external email address will display as Guests.

## **What if I misspell a name when I create and sync a list?**

If the domain is correct (companyname.com), the person will be added to the list. However, messages going there will be flagged as undeliverable by PoliteMail. You can always replace the recipient with the correct spelling in PoliteMail, and re-sync your list.

## **Does two-way sync work with Filtered Lists?**

Support for [Filtered Lists](#) is coming soon!
