Using the InstallShield Wizard to Repair the PoliteMail Client

Last Modified on 10/22/2025 11:15 am EDT

To repair a damaged PoliteMail client, run the client.exe of the version you have installed. You will find this link in the Welcome email you received from PoliteMail.

- 1. After clicking this link, choose Run. You will then be brought to the InstallShield Wizard.
- 2. From the next window, choose Repair.
- 3. In the next window, confirm your installation settings and destination folder. If correct, click Install.
- 4. When finished, you get a confirmation window. Click Finish to complete the process.
