When configuring Microsoft Graph and SSO, do we need to enable public client flows?

Applies To: PoliteMail Desktop PoliteMail Online PoliteMail M365

Version: 4.9 5.0 5.1+

Implicit Grants

PoliteMail uses authorization code flow, so Implicit grants or flows can be turned OFF and PoliteMail will function normally. Implicit flows were historically on by default but have been deprecated by Microsoft because they relied on third-party cookies.

Advanced settings

Allow public client flows

• App collects plainted password (Resource Owner Plasoword Credential Flow) Learn more pt
• No keyboard (Device Code Flow) Learn more pt
