Version:  4.9  5.0  5.1+

Creating non-Breaking Space

Sometimes you may need to insert a space between words, but you don't want the system to force a line break there, no matter what!

This is a functionality built into Windows or MacOS, not PoliteMail. Use the below keystroke to make the space instead of just pressing spacebar, and a non-breaking space will be used instead.

Windows: Ctrl-Alt-Space

MacOS: Option-Space
